Researchers Studies

Currently Enrolling

New Diagnosis:

- **NOVOCURE EF-14**: A Prospective, Multi-Center Trial of NovoTTF-100A Together with Temozolomide Compared to Temozolomide Alone in Patients with Newly Diagnosed GBM (Note – This is a Device study)

- **NORTHWEST BIO DCVax**: A Phase II Clinical Trial Evaluating DCVax®-Brain, Autologous Denditric Cells Pulsed with Tumor Lysate Antigen for the Treatment of Glioblastoma Multiforme

- **CELLDEX ACT IV**: An International, Randomized, Double-Blind, Controlled Study of Rindopepimut/GM-CSF with Adjuvant Temozolomide in Patients with Newly Diagnosed, Surgically Resected, EGFRvIII-Positive Glioblastoma

- **BTTC 11-01 VIMPAT**: A Randomized, Double-Blind, Placebo-Controlled Trial of Lacosamide for Seizures Prophylaxis in Patients with High-Grade Gliomas

Recurrent:

- **CELLDEX ReACT**: A Phase II Study of Rindopepimut/GM-CSF in Patients with Relapsed EGFRvIII-Positive Glioblastoma

- **BTTC 11-02 VORINOSTAT**: A Phase I/II Adaptive Randomized Trial of Bevacizumab versus Bevacizumab plus Vorinostat in Adults with Recurrent Glioblastoma

- **BTTC 09-01 SORAFENIB**: A Phase I/II trial Everolimus and Sorafenib in Patients with Recurrent High-Grade Gliomas
